LibGuides Tutorial 7: Changing the Layout

If you are creating a Guide from scratch, you may want to change the layout of your Guide. You can decide if you want one, two, three, or four columns. Under the two and three column options, you can select the size that would like each column to be in terms of percentages. You can change the layout of each page individually. If you are using a template, you will not be able to change the layout of your Guide.
